ICR HV100-27 set

Near-Field Microprobe 1.5 MHz - 6 GHz

Short description

The near-field microprobe is designed for a high-resolution measurement of magnetic near fields. With the ICR H probe the following measurements can be performed:

- Surface Scan via IC according to IEC 61967-3
- Volumenscan via IC
- Pin Scan

The measuring coil at the ICR RF probe head is vertically aligned to the measurement surface.
A preamplifier is integrated into the probe housing and powered by the Bias-Tee.
The ICR near-field probes undergo a quality check before they are delivered. Different reference setup measurements are performed and resulting correction lines are generated. Three different correction lines are determined – a standardized correction line, an H-field correction line, and a current correction line.

Attention: Due to its construction, the ICR probe is sensitive to shock and comes with a protective cap for transport and handling.

Scope of delivery

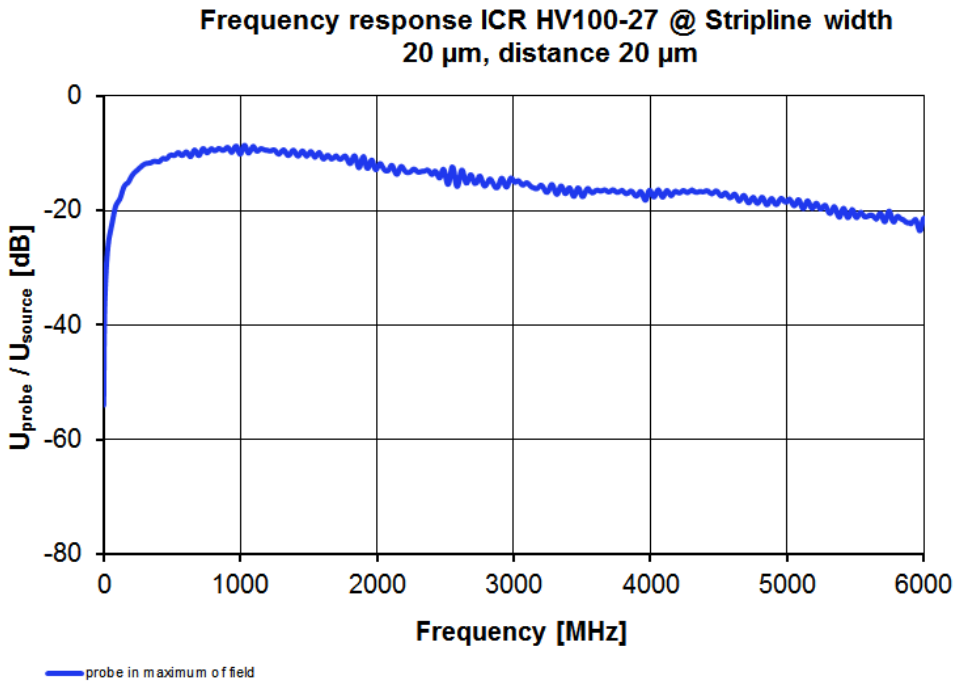

1x ICR HV100-27, Near-Field Microprobe 1.5 MHz to 6 GHz
1x BT 706, Bias Tee for Langer probes
1x SMA-SMA RA, Cable SMA-SMA, right angle
1x ICR-C, ICR Certificate
1x ICR Corr, Correction Curves ICR / USB
1x NT FRI EU, Power Supply Unit
1x ICR case1, System Case

Technical parameters

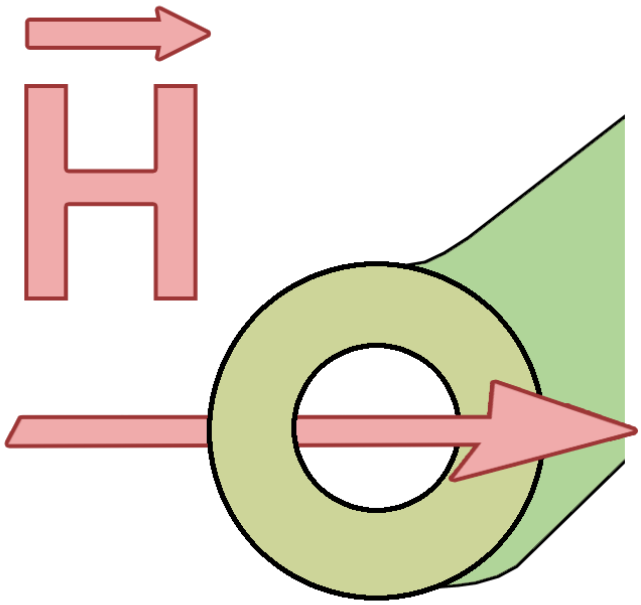

Frequency range	1.5 MHz ... 6 GHz
Resolution	60 µm
Internal diameter	100 µm
